Before CYTOCLEAN® cleaning

After CYTOCLEAN® cleaning

Are your Vessel fit for 2015 SECA - Regulation ?

CYTOCLEAN®

the easiest, fastest and cheapest way to be inside the new rules !

Due to the upcoming regulation to use only Fueloil with a max. content of 0,1% Sulphur inside the SECA area, most of our customers decided to clean one or more tanks on board with CYTOCLEAN® to be prepared, when joining the SECA – area.

As per their experience the CYTOCLEAN® - process is the fastest and cheapest way to clean the tanks to the required standard and ready for use of any oil inside the regulation.

- **CYTOCLEAN®** ensures a pore-clean grade in the mild steel tanks and ensures that no residues will contaminate the fuel to exceed the 0,1 % regulation.
- **CYTOCLEAN®** can clean tanks and pipes during vessels voyage, without heavy equipment and disturbing daily work at sea.
- **CYTOCLEAN®** will not produce any (additional) disposal because oil and water are 100% separated. The oil might be re-used and the water, which does not content any oil, can be disposed via vessels regular systems.

CYTOCLEAN® and CATCO® are registered Trademarks of GLOBAL CONCEPT GMBH
